

# [Top 10 Best IoT Cloud Platforms in China](#)

The [top 10 best IoT cloud platforms in China](#) include Alibaba Cloud IoT Platform, Huawei Cloud IoT Platform, [Amazon Cloud IoT Platform](#), Tencent IoT Platform, Tuya Smart IoT Platform, Baidu Cloud IoT Platform, Telecom CTWing IoT Platform, Mobile OneNET IoT Platform, China Unicom IoT Platform, and JD IoT Platform.

In China, IoT cloud platforms, as a core component of [IoT technology](#), are driving digital transformation and innovation in various industries.

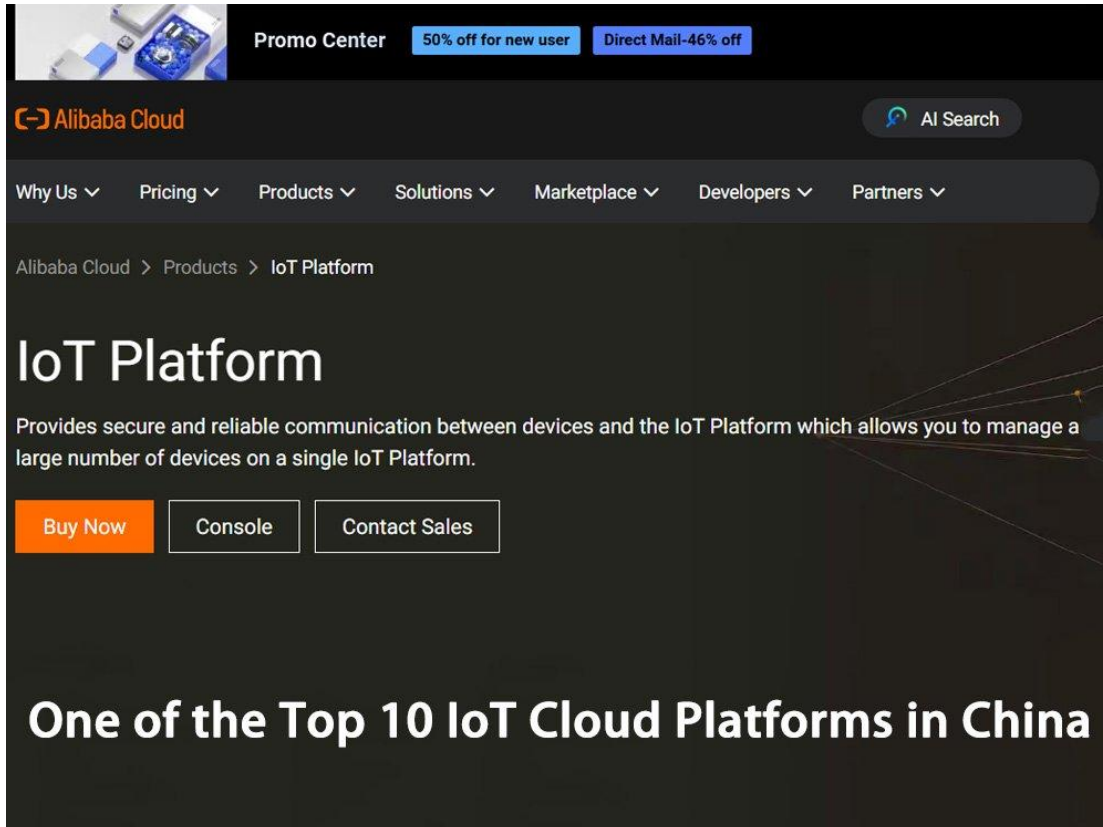

## List of Top 10 IoT Cloud Platforms in China

Ranking	China IOT Platforms
1	Alibaba Cloud IoT Platform
2	Huawei Cloud IoT Platform
3	Amazon Cloud IoT Platform
4	Tencent IoT Platform
5	Tuya Smart IoT Platform
6	Baidu Cloud IoT Platform
7	Telecom CTWing IoT Platform
8	Mobile OneNET IoT Platform
9	China Unicom IoT Platform
10	JD IoT Platform

The following is a detailed introduction to the top ten [best IoT cloud platforms in China](#).

## Alibaba Cloud IoT Platform

## [IoT cloud platform](#)

## One of the Top 10 IoT Cloud Platforms in China

### One of the top 10 IoT cloud platforms in China

#### 1. Platform Overview

Alibaba Cloud IoT Platform is an [IoT solution](#) under Alibaba Group. With its complete product system, continuously integrated new technologies, and cloud-network-edge-end security integrated service capabilities, it occupies a leading position in the IoT field.

#### 2. Core Functions

- **Device Access and Management:** Supports a variety of devices and protocols, and provides secure and reliable device access, management, monitoring and operation services.
- **Data Analysis and Application Development:** Continuously integrate new technology capabilities in data analysis and application development enablement, and provide diversified value-added services based on the platform.
- **Edge computing and security services:** Extending services to the periphery of the IoT platform, providing [IoT edge computing](#), [IoT security](#) services, and device-side services.

#### 3. Industry applications

Alibaba Cloud IoT platform has been widely used in multiple industries such as industry, agriculture, urban governance, and new energy. For example, Jinlong

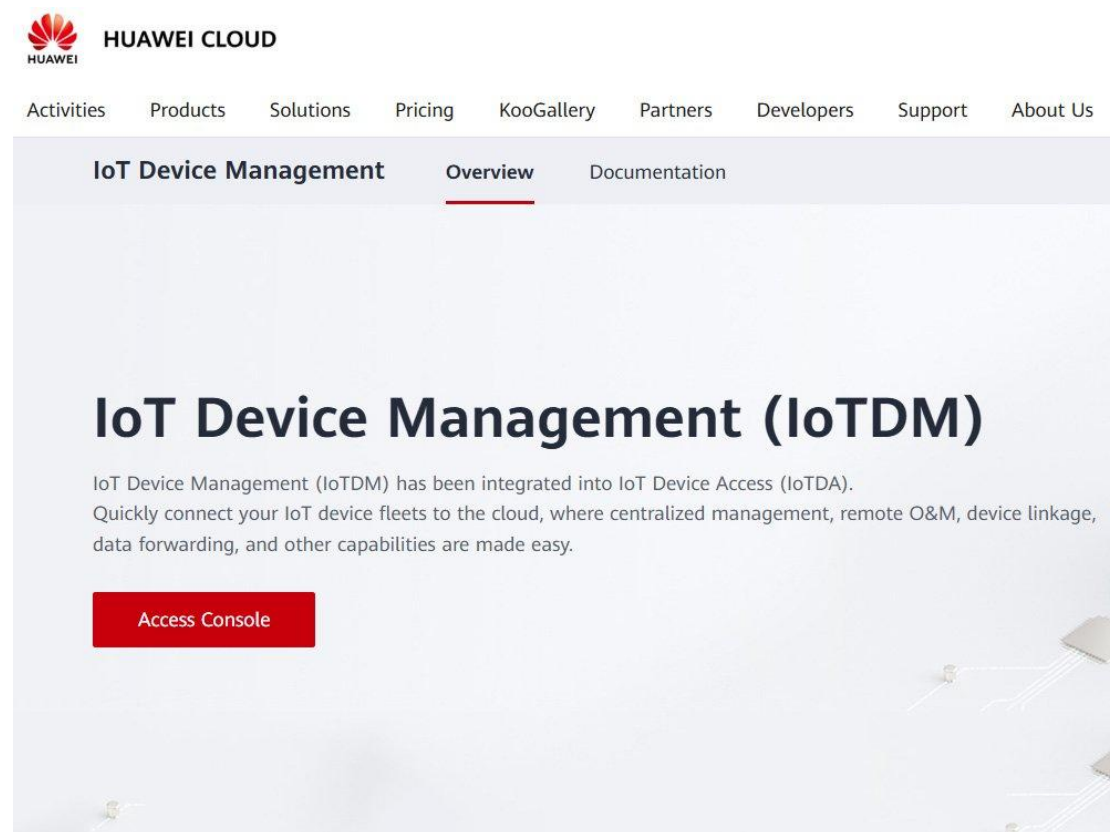

## [IoT cloud platform](#)

Technology, a leading new energy company, uses this platform to maintain the efficient and stable operation of hundreds of thousands of inverters; in FAW Hongqi Factory, the platform uses distributed data acquisition technology to help it achieve real-time linkage of digital twins of five major workshops.

### 4. Technological innovation

Alibaba Cloud continues to launch innovative technologies, such as **IoT Digital Intelligence Base 3.0**, which has comprehensively updated multiple product capabilities such as IoT digital twins and intelligent network connections, and released new application engines and solutions for different industries.

## Huawei Cloud IoT Platform

The screenshot shows the Huawei Cloud IoT Platform website. At the top left is the Huawei Cloud logo. A navigation menu includes: Activities, Products, Solutions, Pricing, KooGallery, Partners, Developers, Support, and About Us. Below the navigation is a sub-menu for IoT Device Management with options: IoT Device Management, Overview (selected), and Documentation. The main content area features the heading "IoT Device Management (IoTDM)" and a sub-heading "IoT Device Management (IoTDM) has been integrated into IoT Device Access (IoTDA). Quickly connect your IoT device fleets to the cloud, where centralized management, remote O&M, device linkage, data forwarding, and other capabilities are made easy." A red button labeled "Access Console" is positioned below the text. The background of the page features a faint image of a circuit board.

## Huawei Cloud IoT Platform

### 1. Platform Overview

Huawei Cloud IoT Platform is based on the cloud and combines the advantages of operators to perform well in [NB-IoT](#) scenarios. It is committed to bringing everything into the intelligent world, providing comprehensive services from three aspects: ubiquitous connection of things, scenario-based twins of things, and intelligent collaboration of things.

## IoT cloud platform

### 2. Core functions

- **Ubiquitous connectivity:** Based on more than 60 industry access protocols, it provides a variety of device protocol libraries for subdivided industries to flexibly adapt to the multi-source heterogeneous access requirements in industry scenarios.
- **Scenario-based twin:** It provides a simple, easy-to-use and powerful twin modeling engine, supports multi-dimensional modeling of devices, scenarios, and mechanisms, and creates a scenario-based digital twin that integrates time and space.
- **Intelligent collaboration:** It provides customers with an industry ecosystem workbench to achieve collaboration between cloud resources, center and edge, and multiple roles, and accelerate the construction and delivery efficiency of IoT solutions.

### 3. Technical advantages

Huawei Cloud IoT Platform combines the advantages of offline software and hardware delivery capabilities, and is particularly suitable for enterprises with business scenarios facing local deployment. Its distributed cascade architecture of end-edge-cloud collaboration can meet the diverse needs of enterprise digitalization.

## Amazon Cloud IoT Platform

### Amazon Cloud IoT Platform

#### 1. Platform Overview

## IoT cloud platform

As a leading cloud computing company, Amazon Web Services has launched IoT IoT platform services in China, including cloud products such as device management, device access, edge services, operating systems, device security management, and device analysis.

### **2. Core functions**

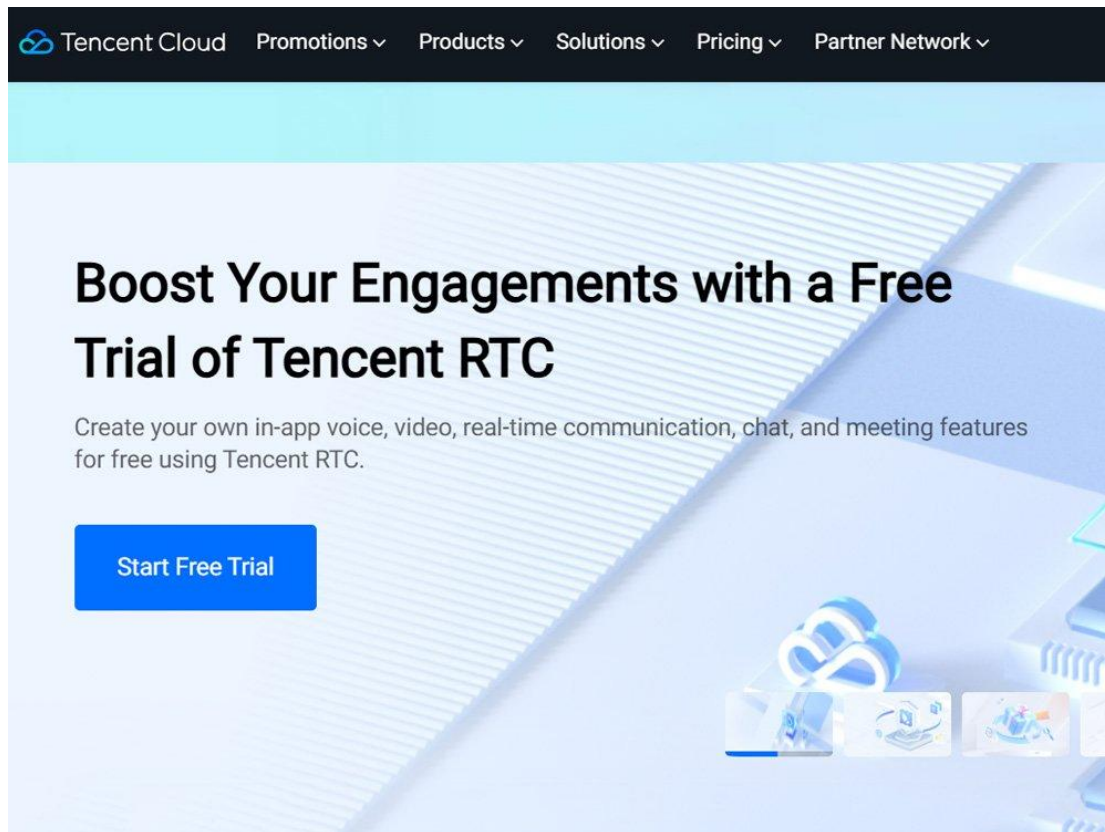

- **Device management:** Provides comprehensive device management services, including device registration, configuration, monitoring and troubleshooting.
- **Device access:** Supports access to multiple devices and protocols to achieve seamless connection of devices.
- **Edge services:** Provides edge computing capabilities to enable devices to perform real-time processing at the edge, improving the response speed and stability of the system.

### **3. Service advantages**

Amazon Cloud IoT platform has mature pricing and fine granularity. Enterprises can clearly anticipate every penny of expenditure. It is particularly suitable for foreign customers who are doing business in China, achieving the unification of global technical architecture and reducing enterprise R&D and operation and maintenance costs.

## Tencent Cloud IoT Platform

## [IoT cloud platform](#)

The screenshot shows the top navigation bar of the Tencent Cloud website with links for Promotions, Products, Solutions, Pricing, and Partner Network. The main content area features a large blue banner with the headline "Boost Your Engagements with a Free Trial of Tencent RTC". Below the headline, it states: "Create your own in-app voice, video, real-time communication, chat, and meeting features for free using Tencent RTC." A prominent blue button labeled "Start Free Trial" is positioned on the left side of the banner. On the right side, there are several small icons representing various IoT and communication services.

### Tencent Cloud IoT Platform - China's Internet of Things Cloud Platform Service Provider

#### 1. Platform Overview

Tencent Cloud IoT Platform has rich functions and strong technical support, supports massive device connection and data storage, and provides intelligent analysis and data mining functions.

#### 2. Core functions

- **Device connection and management:** Supports access to multiple devices and protocols, and provides device connection, management and monitoring services.
- **Data storage and analysis:** Provides massive data storage capabilities and supports intelligent analysis and data mining functions.
- **Security assurance:** Provides comprehensive security measures to ensure data security and privacy.

#### 3. Service advantages

The security and ease of use of Tencent Cloud IoT platform have been widely recognized in the industry and is a preferred option for enterprises to choose IoT platforms.

# Tuya Smart IoT Platform

 [Platform](#) [Solutions](#) [Developers](#) [Services & Support](#) [Company](#)

## Create AI-Driven Smart Products your way

Leverage cutting-edge AI and a decade of Tuya's expertise to build smarter, AI-driven products on our platform with ease.

### Tuya Smart IoT Platform - One of the top 10 IoT cloud platforms in China

#### 1. Platform Overview

Tuya Smart IoT Platform is a global intelligent platform dedicated to making intelligence simpler. It provides a one-stop intelligent solution to help traditional manufacturing companies quickly achieve intelligent transformation.

#### 2. Core functions

- **Equipment intelligence:** Provides equipment intelligence solutions to enable traditional equipment to have intelligent connection and control capabilities.
- **Platform docking and integration:** Supports docking and integration of multiple platforms and systems to achieve device interconnection.
- **Data analysis and operation:** Provides data analysis services to help companies gain a deep understanding of user needs and behavioral habits and optimize products and services.

#### 3. Service Advantages

## [IoT cloud platform](#)

Tuya Smart IoT Platform has a global service network and rich industry experience, and can provide customized intelligent solutions for enterprises.

# Baidu Cloud IoT Platform

 [BAIDU AI CLOUD](#) [中国站](#) [Products](#) [Documentation](#) [Developer Resources](#)

## Partner with Baidu AI cloud

To build AI infrastructure for an accelerated upgrade of intelligence  
enabling endeavors

# Baidu Cloud IoT Platform

One of the Top 10 IoT Cloud Platforms in China

## Baidu Cloud IoT Platform

### 1. Platform Overview

Baidu Cloud IoT Platform is an IoT solution launched by Baidu. Relying on Baidu's strong technical strength and ecological resources, it provides comprehensive IoT services for enterprises.

### 2. Core Functions

- **Device Access and Management:** Supports access to multiple devices and protocols, and provides device access, management and monitoring services.
- **Data Analysis and Intelligent Control:** Provides data analysis services, supports intelligent control and automated management functions.
- **Security and Privacy Protection:** Provides comprehensive security and privacy protection measures to ensure data security and privacy.

### 3. Service Advantages

## IoT cloud platform

Baidu Cloud IoT Platform focuses on user experience and security design, and is a reliable choice for enterprises to choose IoT platforms.

## Telecom CTWing IoT Platform

### Telecom CTWing IoT Platform

#### 1. Platform Overview

Telecom CTWing IoT Platform is an IoT service platform launched by China Telecom, dedicated to providing enterprises with efficient, secure and reliable IoT solutions.

#### 2. Core functions

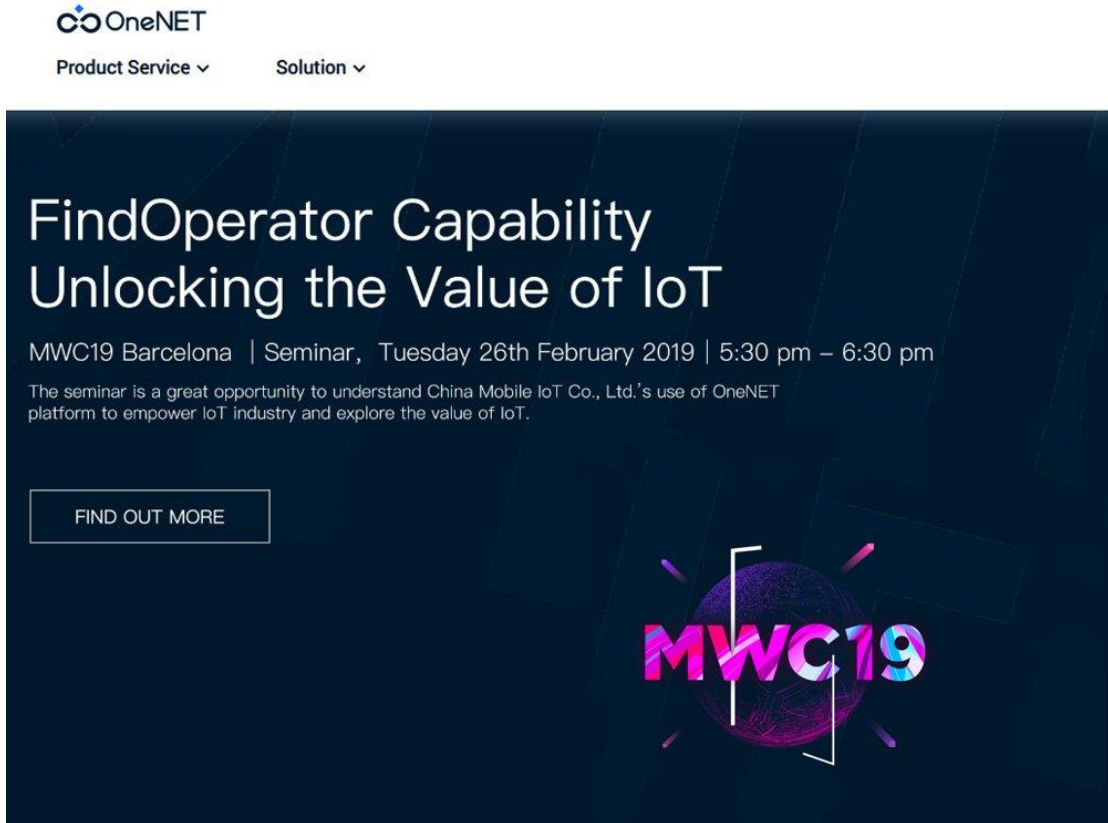

- **Device connection and management:** Provides device connection, management and monitoring services, and supports access to multiple devices and protocols.
- **Data analysis and application development:** Provides data analysis services, supports application development and customized solutions.
- **Security assurance and operation and maintenance services:** Provides comprehensive security assurance and operation and maintenance services to ensure the stable operation of the system.

#### 3. Service advantages

## [IoT cloud platform](#)

Telecom CTWing IoT platform relies on China Telecom's powerful network resources and industry experience to provide high-quality IoT services for enterprises.

## Mobile OneNET IoT platform

The screenshot shows the OneNET website header with the logo and navigation links 'Product Service' and 'Solution'. Below is a dark blue banner for a seminar. The main text reads 'FindOperator Capability Unlocking the Value of IoT'. The event details are 'MWC19 Barcelona | Seminar, Tuesday 26th February 2019 | 5:30 pm – 6:30 pm'. A sub-headline states: 'The seminar is a great opportunity to understand China Mobile IoT Co., Ltd.'s use of OneNET platform to empower IoT industry and explore the value of IoT.' A 'FIND OUT MORE' button is present. The MWC19 logo is at the bottom right.

### Mobile OneNET IoT platform

#### 1. Platform overview

Mobile OneNET IoT platform is an IoT open platform launched by China Mobile, dedicated to providing enterprises with one-stop IoT solutions.

#### 2. Core functions

- **Device access and management:** Supports access to multiple devices and protocols, and provides device access, management and monitoring services.
- **Data storage and analysis:** Provides massive data storage capabilities, and supports intelligent analysis and data mining functions.
- **API interface and service:** Provides rich API interfaces and services to support enterprises to quickly develop and integrate IoT applications.

#### 3. Service advantages

## IoT cloud platform

Mobile OneNET IoT platform is open, flexible and scalable, and can meet the diverse IoT needs of enterprises.

## China Unicom IoT platform

### China Unicom IoT platform

#### 1. Platform overview

China Unicom IoT platform is an IoT service platform launched by China Unicom. Relying on China Unicom's powerful network resources and industry experience, it provides comprehensive IoT services for enterprises.

#### 2. Core functions

- **Device connection and management:** Provides device connection, management and monitoring services, and supports access to multiple devices and protocols.
- **Network service and optimization:** Provides efficient and stable network services, supports network optimization and troubleshooting functions.
- **Security assurance and operation and maintenance support:** Provides comprehensive security assurance and operation and maintenance support services to ensure the stable operation of the system.

## IoT cloud platform

### 3. Service advantages

China Unicom IoT platform focuses on the stability and security design of network services, which is an important consideration for enterprises when choosing IoT platforms.

## JD IoT Platform

**JD IoT Platform is one of the top 10 IoT cloud platforms in China**

### 1. Platform Overview

JD IoT Platform is an IoT solution launched by JD Group. Relying on JD's rich experience and strong technical strength in the logistics field, it provides convenient IoT services for enterprises.

### 2. Core Functions

- **Device Connection and Management:** Supports access to multiple devices and protocols, and provides device connection, management and monitoring services.
- **Logistics Data Analysis and Optimization:** Provides logistics data analysis services, supports the optimization of logistics processes and improves efficiency.

## IoT cloud platform

- **Intelligent Control and Automated Management:** Supports intelligent control and automated management functions to improve the intelligence level of logistics operations.

### 3. Service Advantages

JD IoT Platform has rich application scenarios and industry experience in the logistics field, and can provide customized IoT solutions for enterprises.

In summary, the top ten [best IoT cloud platforms](#) in China have their own characteristics and can meet the diverse needs of different industries and enterprises. When choosing an [IoT platform](#), enterprises should make comprehensive considerations based on their own business needs and technical strengths, and choose the platform solution that best suits them.

## About IOT Cloud Platform

[IOT Cloud Platform](#) ([blog.iotcloudplatform.com](http://blog.iotcloudplatform.com)) focuses on **IoT solutions**, IoT programming, security IoT, industrial IoT, military IoT, satellite IoT, IoT modules, [embedded development](#), RFID, lora devices, [IoT systems](#), sensors, temperature and [humidity sensors](#), liquid level sensors, [sensor](#) equipment, smart homes, smart cities and other scientific and technological knowledge and products.

## FAQs

The following are the FAQs about the top ten best IoT cloud platforms in China:

What are the top ten best IoT cloud platforms in China?

The top ten best IoT cloud platforms in China include Alibaba Cloud IoT Platform, Huawei Cloud IoT Platform, Amazon Cloud IoT Platform, Tencent Cloud IoT Platform, Tuya Smart IoT Platform, Baidu Cloud IoT Platform, Telecom CTWing IoT Platform, Mobile OneNET IoT Platform, China Unicom IoT Platform and (depending on market conditions and different evaluation criteria, other excellent platforms such as JD IoT Platform may also be included).

What are the core functions of Alibaba Cloud IoT Platform?

The core functions of Alibaba Cloud IoT Platform include device access and management, data analysis and application development, edge computing and security services. It supports the access of multiple devices and protocols, provides secure and reliable device access, management and monitoring operation and

## IoT cloud platform

maintenance services, and continuously integrates new technology capabilities in data analysis and application development enablement.

What are the unique advantages of Huawei Cloud IoT Platform?

The unique advantages of Huawei Cloud IoT Platform lie in its ubiquitous connection capabilities, scenario-based twin technology and intelligent collaborative workbench. It is based on multiple industry access protocols, provides device protocol libraries for multiple sub-industries, and has a distributed cascade architecture with end-edge cloud collaboration, which can meet the diverse needs of enterprise digitalization.

Which companies are suitable for Amazon Cloud IoT platform?

Amazon Cloud IoT platform is particularly suitable for foreign customers who are doing business in China, as well as companies that need to unify global technical architecture and reduce R&D and operation and maintenance costs. Its pricing is mature and granular, and companies can clearly anticipate every penny of expenditure.

How secure is Tencent Cloud IoT platform?

Tencent Cloud IoT platform focuses on security design and provides comprehensive security measures to ensure the security and privacy of data. It supports multiple security protocols and encryption technologies, and can provide reliable security for enterprises.

Which industries does Tuya Smart IoT platform mainly serve?

Tuya Smart IoT platform mainly serves traditional manufacturing companies and is committed to making intelligence simpler. It provides a one-stop intelligent solution to help traditional manufacturing companies quickly realize intelligent transformation, and is widely used in home appliances, lighting, security and other industries.

What are the application scenarios of Baidu Cloud IoT platform?

The application scenarios of **Baidu Cloud IoT platform** are very wide, including [smart manufacturing](#), smart cities, smart agriculture and other fields. It supports functions such as device access and management, data analysis and intelligent control, and can provide enterprises with comprehensive IoT solutions.

What are the service advantages of Telecom CTWing IoT platform?

The service advantage of Telecom CTWing IoT platform lies in its efficient, secure and reliable IoT solutions. Relying on China Telecom's powerful network resources

## IoT cloud platform

and industry experience, it can provide enterprises with a full range of services such as device connection and management, data analysis and application development, security assurance and operation and maintenance services.

What devices and protocols does Mobile OneNET IoT platform support?

Mobile OneNET IoT platform supports access to multiple devices and protocols, including common IoT protocols such as [MQTT](#) and [CoAP](#). It can provide enterprises with device connection, management and monitoring services, and support massive data storage and analysis functions.

In what aspects does China Unicom IoT platform excel?

China Unicom IoT platform excels in network services and optimization, security assurance and operation and maintenance support. Relying on **China Unicom's** powerful network resources and industry experience, it can provide enterprises with efficient and stable network services and support network optimization and troubleshooting functions. At the same time, it also focuses on security and operation and maintenance support services to ensure the stable operation of the system.
